

Installing ArcInfo Workstation 9.2 on Vista

If you use setup.exe when installing ArcInfo Workstation on a Vista machine, you may encounter some difficulties during this software installation.

Exceptions: This problem will not occur if

- The machine had all the necessary system files required for ArcInfo Workstation previously installed.
- A silent or User Interface installation was performed using setup.msi.

Please follow these instructions when installing to help you install the software.

1. Run Setup.exe from the Windows folder on the installation media.
2. Select continue on the User Account Control dialog.
3. Select the installation type.
4. Complete the license manager dialogs.
5. The Microsoft Systems Files dialog will appear if the machine did not fit into any of the exceptions listed above:

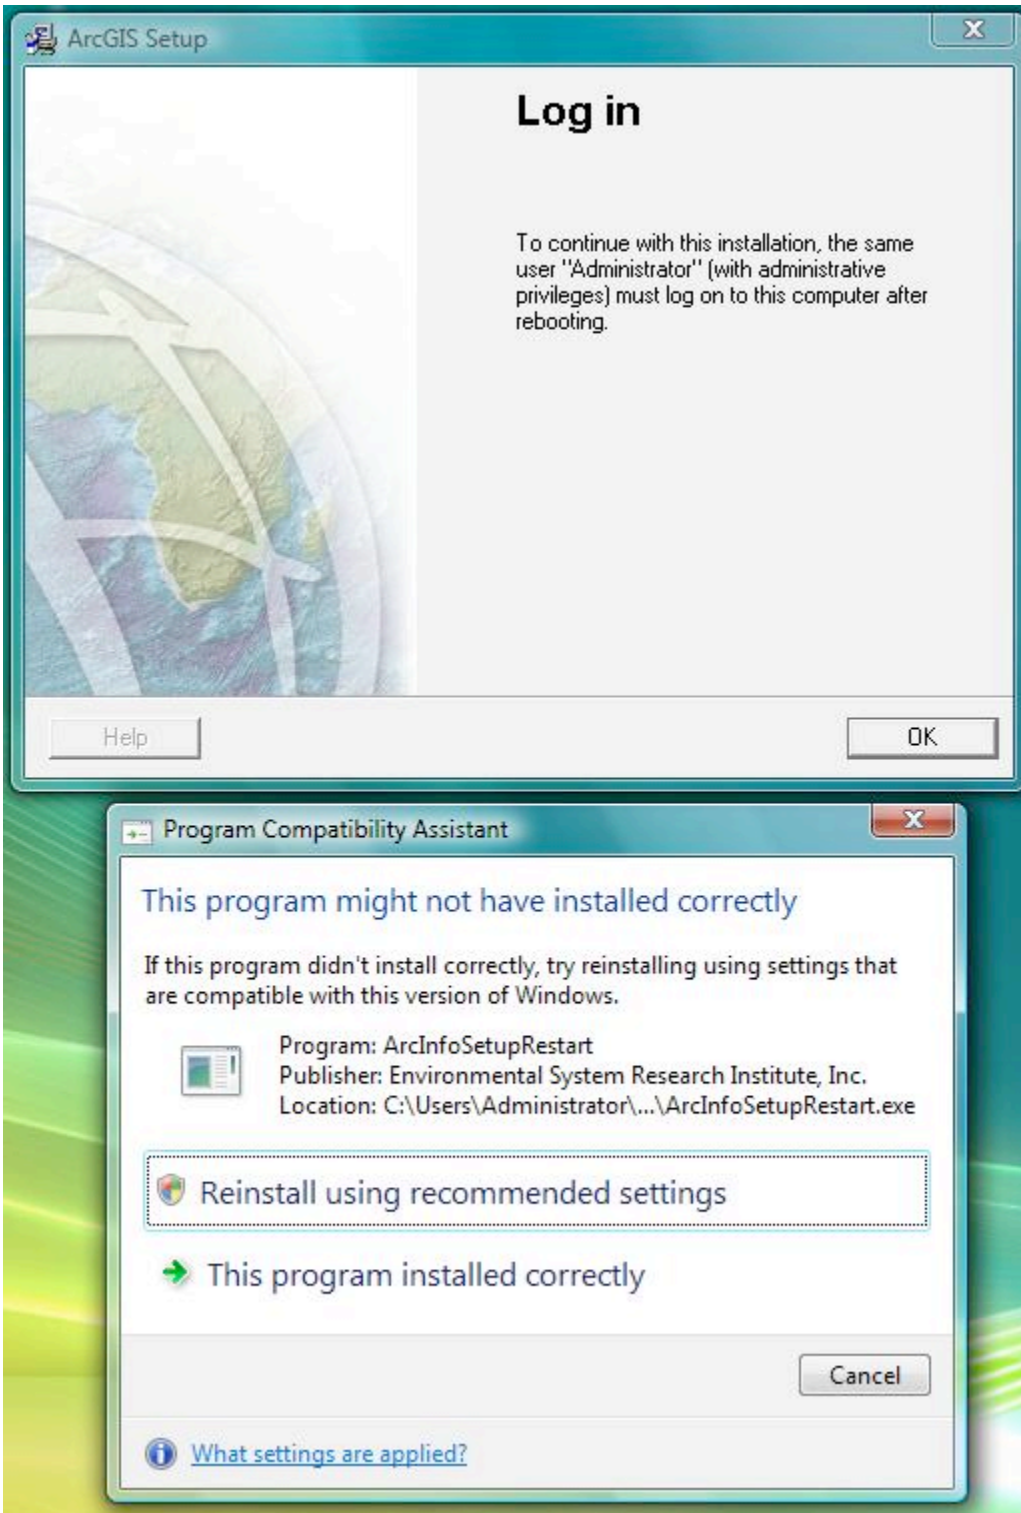

6. Click 'Update Microsoft system files'. This procedure will install the required system files for ArcInfo Workstation.

7. The System Reboot dialog will now appear;

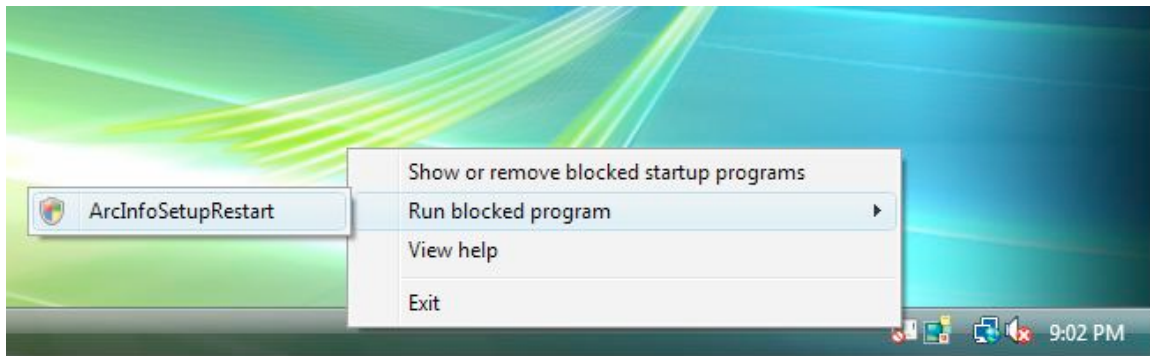

8. Click 'Restart computer'.

9. A Log in dialog and the Program Compatibility Assistant dialog will be displayed.

10. Click Cancel out of the Program Compatibility Assistant dialog and click the OK button on the Log in window to continue rebooting the machine.

11. Log back into the machine using the same account used for starting the installation.
12. Now a call out box from the Blocked Programs icon should appear on the task bar. If you do not see this icon, double click on the Blocked Program Icon as illustrated below.

13. Click on the icon > select Run blocked program > and then select the ArcInfoSetupRequest as shown above.
14. Now follow the remaining installation instructions on the dialogs to finish installing ArcInfo Workstation.
